

## How to view postscript files.

- A) Use inkscape (takes a long time to load each image)
- B) Use psviewer.org – worked using chrome. The site comes with a lot of advertisement. The green button is the one that allows to load files to be viewed.
- C) Install the postscript viewer extension in google chrome.

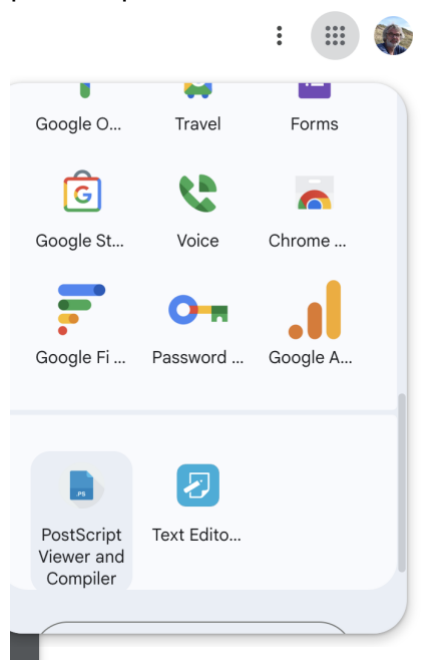

<https://chromewebstore.google.com/search/PostScript%20Viewer>

Login with your google ID and password

Add to chrome

Add extension

If you go to the 9 dots in a square on the top right, at the bottom of the list is the postscript viewer. Select it!

In the page that opens, at the bottom is a choose file window. Load the file you want to view (you need to disable adblock for the site).

- D) Use an older version of GIMP. Version 2.10.28 works on my MacBook. You can download it [here](#).
